What is an airport?

[HOME](#) [KIDS AREA](#) [WHAT IS AN AIRP...](#)

It is a large space dedicated to several operations: takeoff and landing aircraft, the embarkation and disembarkation of passengers and goods.

An aircraft can operate at airports with the construction of long flat tracks. Use is made of these tracks at each takeoff and landing.

An airport has normally at least one terminal. It is a building where passengers check in their luggage and board a plane.

The terminal is often divided into two parts: departures and arrivals.
