Etudes préliminaires

This project is in line with a sustainable development perspective and allows to anticipate and control the environmental impacts of various airport activities. Airports Mohammed V, Marrakech, Agadir, Rabat, Fez, Oujda, and Tangier are certified ISO 14001 V 2004.

The launch of the project to upgrade the Environmental Management Systems of the airports according to the requirements of the new version (2015) of ISO 14001 is in the process of being launched.

In order to expand this experience to all national platforms, the EMS will be implemented at the Nador Al Aroui and Ouarzazate Airports.
