In terms of air navigation, the implementation of specific procédures :

« Continuous decreasing operations » enabling on the short and longer term

Reduction of fuel consumption from 8% to 10%;
Reduction of noise emissions from 2 to 9 db, and 23 to 42% reduction in areas affected by noise related to take offs;
Noise reduction of 3 to 12 db, and 8 to 36% noise reduction in surrounding areas on the approach;
35% CO2, HC and NOX reductions and fuel savings from 50 to 1000 pounds per landing;
Reduction of 90 to 630 kg of CO2 and savings of 60 to 440 pounds of fuel per take off

« Direct Roads and Free Road Spaces» allowing short and long term

Monthly reductions in CO2 emissions of over 2500 tones
Reduction of greenhouse gas emissions by -3%
Reduction in flight time by more than 2.5 min / flight

CO² emissions avoided: thanks to the allocation of direct air routes
-34 393 406 kg in 2015- 2 925 873 kg (first nine months)
